

CITY OF INDIANAPOLIS CAPITAL IMPROVEMENT PROGRAM NEEDS

The need for infrastructure repairs is great across the community, not only for pothole repairs, sidewalks and street resurfacing, but also for improvements to our water and wastewater systems. Annually, the City of Indianapolis needs \$100.4 million to properly keep up with resurfacing its streets, replacing and rehabilitating bridges and maintaining curbs, sidewalks and ramps. Additionally, the City must spend \$5.607 billion to comply with a Consent Decree with the U.S. Environmental Protection Agency, make needed wastewater improvements and continue eliminating failing septic tanks. City engineers are working to expedite the timeline of the projects to achieve savings.

The map above displays the locations of projects needed, including Septic Tank Elimination Program, drainage, sanitary sewer, advanced wastewater treatment plant, street, sidewalk and curb project needs.
